EDUCATION

Bachelor of Science in Computer Science

University of Perpetual Help System DALTA – Molino

- Cum Laude (GWA: 1.51)

June 2026

Bacoor, Cavite

TECHNICAL SKILLS

Languages | Python, JavaScript, Typescript, SQL

Frameworks | Django, Flask, React, React Native

Databases | MySQL, PostgreSQL

Developer Tools | Git, Github, Github Actions, Linux, Ubuntu

Technologies | Ollama, Google Firebase, Power BI, Figma, AWS EC2

Certification | [IT Specialist - Data Analytics](#), [IT Specialist - Python](#)

WORK EXPERIENCE

Systems Developer Intern

Neuronet AI Innovations

Jan 2026 – Mar 2026

Makati City

- Engineered a full-stack hotel operations platform using Python, Flask, PostgreSQL, and Gemini API, to automate guest room service requests, customer inquiries, and inventory management.
- Developed RESTful APIs with Python/Flask and PostgreSQL for user authentication and CRUD operations.
- Built a RAG-based pipeline with Flask and pgvector, enabling semantic search of hotel knowledge for improved relevance of Gemini responses.
- Designed a PostgreSQL database schema with relational models, indexes, and optimized SQL queries.

PROJECTS

TORTOL: An IoT-based Flood Monitoring System – Thesis | [Link](#) | [Demo](#)

May 2025 – Dec 2025

Python, Flask, scikit-learn, JavaScript, React.js, Firebase Realtime Database, M360 API

- Led development and architecture of a real-time flood monitoring dashboard using Flask, React, JavaScript, and Firebase, enabling residents and local government responders to monitor live flood conditions.
- Engineered an automated prediction workflow that fetched live Firebase sensor data and generated flood predictions using a logistic regression model, with weekly model retraining through GitHub Actions.
- Built interactive React dashboards that visualized real-time sensor data, prediction results, historical trends, and admin emergency response tools including SMS alerts and emergency map.

Offline Student Attendance System | [Github](#)

Jun 2025 – Aug 2025

Python, Flask, qrcode, reportlab, sqlite

- Contributed to student attendance system to be deployed for the college of computer studies department.
- Completed automated reporting system with scheduled email delivery of attendance reports to professors.
- Built manual student addition interface alongside importing documents of .xlsx, .csv, .txt file types.

SmartBites: AI Filipino Food Recommendation App | [Github](#)

Feb 2025 – May 2025

Python, Django, TypeScript, React Native, Expo, MySQL, Ollama (Gemma3)

- Led development of a cross-platform mobile application using Django, React Native, TypeScript, and MySQL that personalizes recipe recommendations based on dietary preferences, budget, and allergies.
- Integrated Gemma 3 via Ollama by developing backend services and prompt-generation logic that produced context-aware meal recommendations tailored to Filipino cuisine.
- Designed Django RESTful APIs and reusable React Native components supporting AI chat, budget planning, user preference management, and personalized recommendation workflows.
